

# Mobility TechCheck

Mobility in the enterprise is an opportunity for improved productivity; however it does expose organizations to security concerns, loss of IT governance based on legacy standards/policies which introduces risk to the environment.

Based on the growing trend of complexity in mobility devices, Softchoice developed the Mobility TechCheck to help customers:

- Understand the current mobility devices connected to your corporate IT infrastructure
- Identify the types of devices being used in the environment
- Evaluate the impact of the current trends surrounding mobility and BYOD

## Discovery:

- Catalog mobility devices within the corporate environment using Softchoice's proprietary discovery and visualization tools

## Analysis:

- Subject matter experts evaluate the findings to consolidate the broad data sets into actionable findings to be validated within a recommendations workshop

## Cloud Application Discovery Consultation and Report:

- Business demands & current issue identification – capture the current landscape and collect inputs to focus the workshop activities
- Review risks and remediation through guided data findings evaluation
- Structured whiteboarding session to define next steps based on risk and business priority

## Who should be involved?

The Mobility TechCheck identifies the relevance of mobility trends in your organization and catalogues the client lifecycle for more actionable and accurate planning. Softchoice recommends developing a cross functional client IT team with a senior IT leader sponsor to provide alignment of the issues, business drivers and to guide the prioritization.
